

For best results, use professional vector programs like Illustrator, Coreldraw, or similar. Home programs like MS Word/Publisher don't have the right tools or colour palette. MS Excel is for spreadsheets. MS Powerpoint is for screen slideshows. PhotoShop is for editing bitmap images.

① Use the **allBIZ ONLINE EDITOR**

Put **bleed*** items right to the very edge of the drawing space (they should go beyond the red CUT MARGIN)

*** BLEED:** any object that goes right to the edge of the document. The object must actually go **BEYOND** the finished size by 5mm ("bleed over" the edge).

② Use **ILLUSTRATOR** (or other vector software)

1 - **PAGE SIZE:** see list pg2, **BLEED AREA:** 5mm

2 - **SAVE AS:** PDF (best if /X-1A). Tick "**Trim/Crop marks**" (offset: 5mm) and "**5mm bleed**"

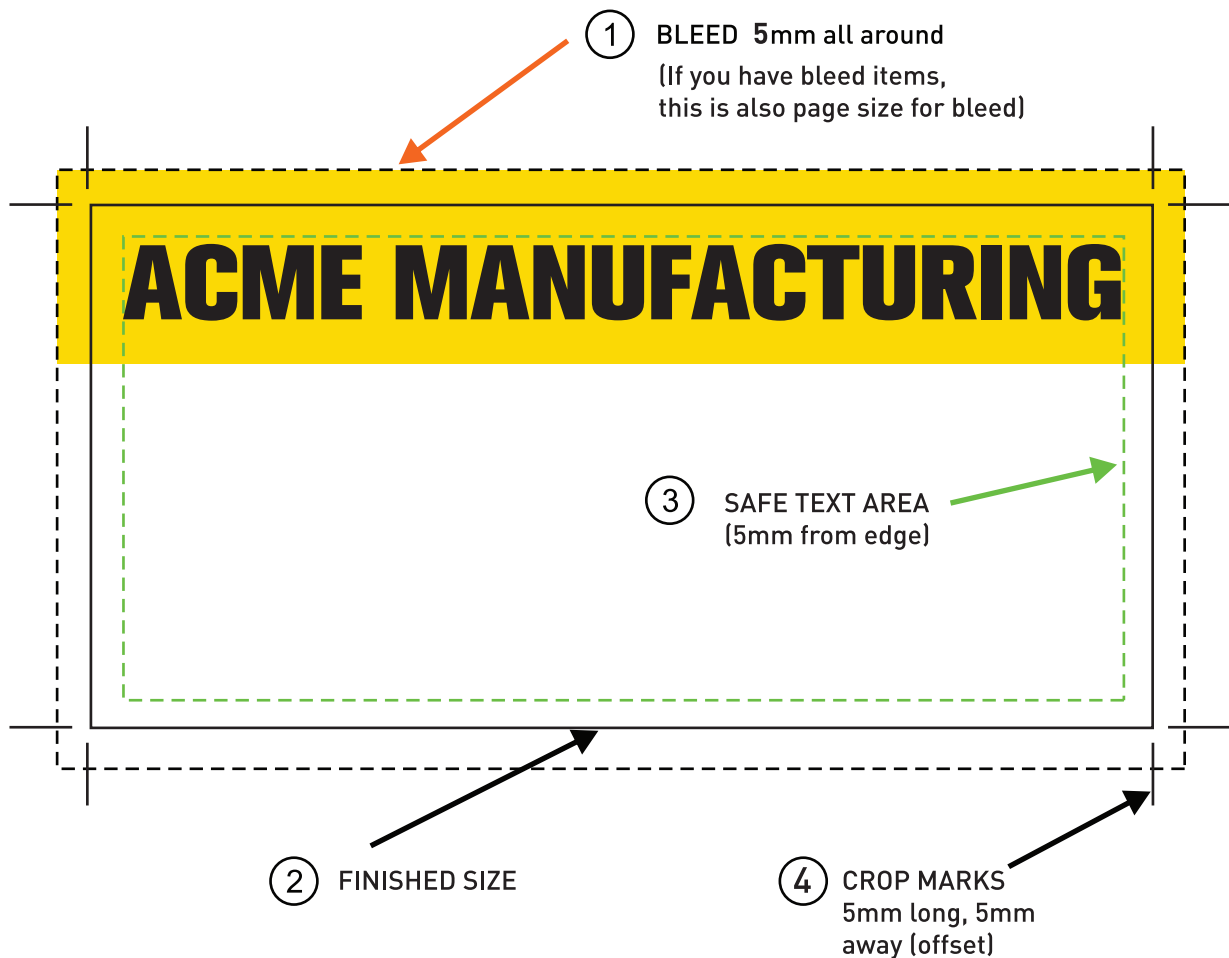

MORE INFO PAGE 2

MAKE SURE YOUR FILES ARE PRINT READY!

- PDF** (PDF/X-1a is better)
- FONTS** embedded (or converted to Curves/Paths/Outlines)
- IMAGES** 600 to 300ppi (less resolution and they will print fuzzy and blocky)
- CMYK** colour only (do not use RGB or Spot or mix them)
- FLATTEN** transparencies/layers (or you will get odd stripes/blocks)
- BLEED 5mm**, and **10 mm** Safe Area away from edge for text
- TRIM BOX** (for bleed jobs) - set to final cut size (or your job will cut wrong)

Your job could be **ruined** by bad files. Fuzzy, wrong colours/fonts, missing bits and more. Wrong files could be **rejected/charged a processing fee.**

If you have to create the file manually using other software, your finished file should match the specs below:

Page Sizes:

ILLUSTRATOR/VECTOR: use these sizes and tick "bleed = 5mm."

MANUAL: if using bleed, **add 5mm** all around and allow for crop marks

A4: 210x297mm

A3: 297x420mm

500x600mm

600x1000mm
