

For best results, use professional vector programs like Illustrator, Coreldraw, or similar. Home programs like MS Word/Publisher don't have the right tools or colour palette. MS Excel is for spreadsheets. MS Powerpoint is for screen slideshows. PhotoShop is for editing bitmap images.

Whether you use the allBIZ online editor or your own software, just make sure your image goes right to the edge of the size you choose. No bleed is necessary.

“No wrap” canvas is suitable for framing in a regular photo frame, or for mounting to board. It is NOT suitable for stretching over a box frame (at least not without losing 45mm all around).

NO WRAP
A-series size (true A4, A3, A2, etc.)

WRAP
Same image with extra 45mm all around for framing.

MAKE SURE YOUR FILES ARE PRINT READY!

- PDF** (PDF/X-1a is better)
- FONTS** embedded (or converted to Curves/Paths/Outlines)
- IMAGES** 150-300ppi (less resolution and they will print fuzzy and blocky)
- CMYK** colour only (do not use RGB or Spot or mix them)
- FLATTEN** transparencies/layers (or you will get odd stripes/blocks)

Your job could be **ruined** by bad files. Fuzzy, wrong colours/fonts, missing bits and more. Wrong files could be **rejected/charged a processing fee.**
